# IPAN IPAN

The IPAN IPAN wireless charging system can be integrated into P.O.V. table tops, turning them into charging surfaces for smartphones and other compatible devices, such as smartwatches and tablets. To charge a device, simply place it on the marked area of the table top. The entire system is concealed within the table top, leaving its appearance unchanged.

IPAN IPAN is certified by the global Qi standard for wireless charging, ensuring compatibility, safety and fast, reliable charging.

The 1.2m-long power supply cable is integrated into the table leg, with part of it on the inside. The cable that extends beyond the leg varies in length depending on the table size and the position of the socket panel.

Please consult your sales representative for information on the maximum number of user modules available for each table variant in the P.O.V. and P.O.V. plus collections.

The socket panels are compatible with the following socket types:

Descriptions of the individual socket types can be found on page 11.

# BACHMANN TWIST2

Tested by Ton, these socket panels from German manufacturer Bachmann combine quality, functionality and design.

Bachmann Twist2 has a discreet, elegant appearance. Rotating the top cover conceals the sockets and data and multimedia modules. It is suitable for smaller tables and table tops, while larger table tops can accommodate two Bachmann Twist2 socket panels.

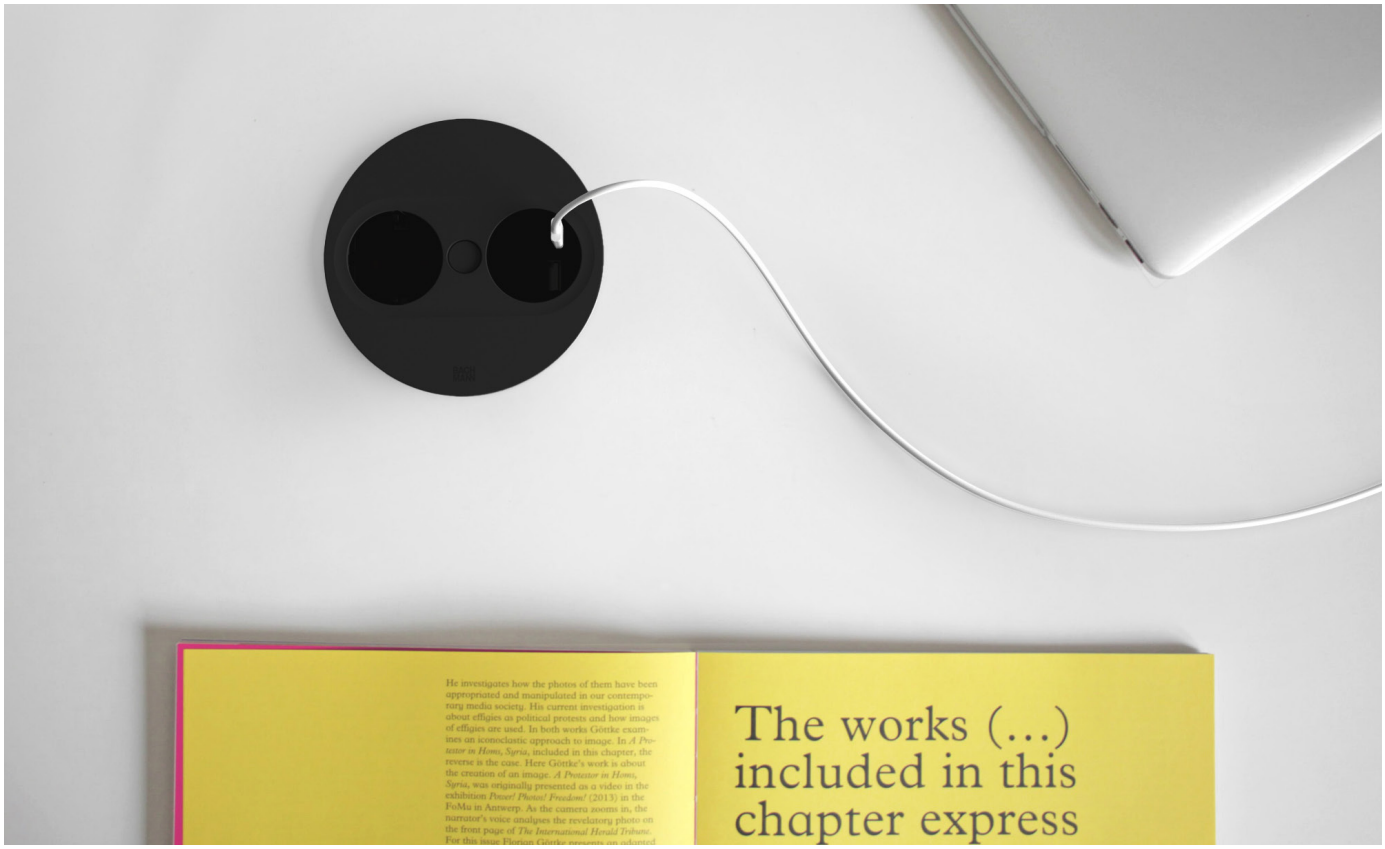

Please contact your sales representative for information on the maximum number of user modules available for each table variant in the P.O.V. and P.O.V. plus collections.

Available finishes include matt black, matt white and brushed stainless steel.

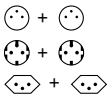

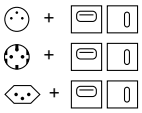

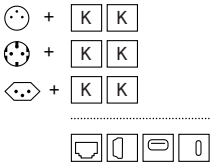

The socket panels are compatible with the following socket types:

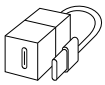

Descriptions of the individual socket types can be found on page 11.

# Configuration options for the BACHMANN TWIST2

| Socket panel | Configuration | Specification | Dimensions |
|---|---|---|---|
| **TWIST2 2Z**  |  | 2 x 230 V sockets with child protection | Ø 115 mm |
| **TWIST2 USB**  |  | 1 × 230 V socket with child protection,<br>1 × USB-A and 1 × USB-C | Ø 115 mm |
| **TWIST2 OFFICE**  |  | 1 × 230 V socket with child protection, 2 user modules – choose from RJ45 CAT 6a, HDMI, USB-A, USB-C | Ø 115 mm |

K

| Keystone module | | Notes |
|---|---|---|
| **RJ45 CAT6a**  |  | Data socket |
| **HDMI**  |  | Audio and video signal transmission |
| **USB-A**  |  | USB-A 3.0 connection |
| **USB-C**  |  | USB-C 3.1 connection |

# BACHMANN TOP FRAME

Bachmann Top Frame combines an elegant appearance with a slim design that takes up minimal space on the table top. When open, the top cover retracts completely, preserving the clean appearance of the table and allowing access to the sockets and data and multimedia modules from all sides. The cover opens with a gentle press. When closed, it protects the sockets and modules from dust and damage.

Two sizes are available: the shorter version accommodates 4 modules (3 in the UK socket configuration), while the longer version accommodates 8 modules (7 in the UK socket configuration).

The data and multimedia modules in Bachmann Top Frame socket panels can be replaced. If your connection requirements change as technology evolves, you can purchase suitable standardised modules and replace them yourself.

Please consult your dealer for information on the maximum number of user modules available for each table variant in the P.O.V. and P.O.V. plus collections.

The top cover is available in black or brushed stainless steel. On request, the metal cover can be replaced with a wooden cover matched to the table top finish.

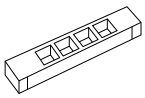

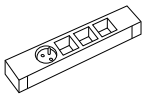

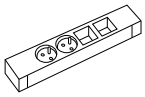

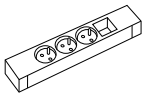

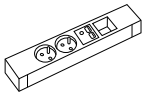

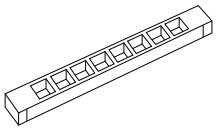

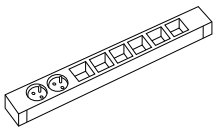

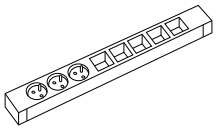

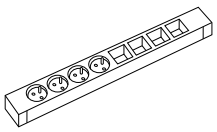

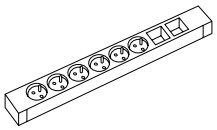

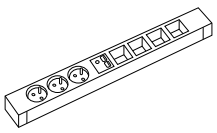

The socket panels are compatible with the following socket types:

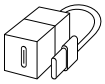

Descriptions of the individual socket types can be found on page 11.

# EVOline

EVOline stands out for its clean design, which has earned it the prestigious Red Dot Award. To raise the socket panel, simply lift one side of the top cover. Once the required cables are connected, gently push the panel back down.

The slightly raised cover leaves room for the connected cables, keeping the table top tidy while protecting the socket panel from dust and damage.

The module can be configured to suit your needs. It provides up to 9 slots: a USB charger occupies 1 slot, a multimedia module occupies 2 slots and a power socket occupies 3 slots. USB charging modules are positioned at the top, power sockets in the middle, and data and multimedia modules at the bottom.

Please contact your dealer for information on the maximum number of user modules available for each table variant in the P.O.V. and P.O.V. plus collections.

The socket panels are available in black, white or a stainless steel finish.

The socket panels are compatible with the following socket types:

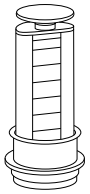

Descriptions of the individual socket types can be found on page 11.

# Configuration options for the EVOline

| Socket panel | Configuration | Specification | Dimensions |
|---|---|---|---|
| **PORT - EVOline®**  | up to 9 slots | A USB charger occupies 1 slot, a multimedia module occupies 2 slots and a power socket occupies 3 slots. | Ø 102 mm |
